

KURESSAARE AIRPORT

GATEWAY TO SAAREMAA

Kuressaare Airport

Kuressaare Airport has daily connections to Tallinn and is expanding its flight schedule to other Scandinavian destinations. It is the only airport on the Saaremaa island, which is situated west from the Estonian mainland.

Saaremaa is a popular destination for Scandinavian and Baltic tourists.

Vanderlande Industries was involved in the design of the Baggage Handling System in a very early stage.

The arrival system consists of a flat carousel including security shutters.

Eventually resulting in a design suited for this small airport consisting of an arrival system and a departure system including X-ray integration.

The departure system consists of 2 check-ins with a Rapiscan 528 X-ray integrated in the take away line.

An adequate baggage handling system for this small regional airport

Baggage Handling
